

WA State School Directors Association Policy 6512

Note: The following is the Washington State School Directors Association policy for infection control. It is provided in this manual as a reference for school staff and volunteers.

Infection Control Program—Management Support

In order to safeguard the school community from the spread of certain vaccine-preventable diseases, and in recognition that prevention is a means of combating the spread of disease, the board strongly urges that susceptible school staff members (including volunteers) provide evidence of immunity against TD (Tetanus-Diphtheria) and MMR (Measles, Mumps and Rubella). Staff members born prior to January 1, 1957 need not provide evidence of immunity to measles; these individuals are considered naturally immune.

To facilitate this prevention program, the board authorizes the superintendent to make arrangements for staff immunization at a convenient time and place, and at a nominal cost to the staff member. A “susceptible” staff member may be exempt from the requirements for immunization by filing a written objection to such immunization on the basis of religious or philosophical grounds, when a private licensed health care provider certifies that the staff member’s physical condition contraindicates immunization or when the staff member provides documentation of immunity by blood test.

In the event of an outbreak of a vaccine-preventable disease in school, the local health officer has the authority to exclude for religious, philosophical or medical reasons or without an acceptable immunization record on file may be excluded, as he/she is considered to be susceptible. If excluded he/she is not eligible to receive sick leave benefits because of the exclusion itself. To qualify for benefits, he/she must be ill or temporarily physically-disabled.

In the event of an outbreak of a vaccine preventable disease in school, the local health officer has the authority to exclude a susceptible staff member.

The superintendent or designee shall evaluate all job duties of district employees to determine which employees have reasonably anticipated on-the-job exposure to blood or other potentially infectious material. The district shall maintain a list of job classifications where employees have reasonably anticipated exposure to blood or other potentially infectious material. The hepatitis B vaccine shall be provided at the district’s expense to all employees identified as having risk of directly contacting blood or other potentially infectious material at work.

In the event that an employee has a specific exposure to blood or other potentially infectious material, the employee will be provided, at district expense, with confidential medical evaluation, follow-up and treatment, if indicated.

The district shall provide annual training to all employees with reasonably anticipated exposure to blood or other potentially infectious material. All employees shall receive district provided training on HIV/AIDS within six months of initial employment.

Records shall be kept in strict confidence regarding the hepatitis B vaccine status of all employees with reasonably anticipated exposure to blood or other potentially infectious material and for each occupational exposure an employee has to blood or other potentially infectious material. The records shall be kept for the duration of the employee’s employment, plus thirty years. The district shall also keep records that employees have received appropriate training.

Infection Control Program—Procedure 6512P Immunization

Staff members, including substitutes, student teachers and volunteers, are encouraged to complete an Immunization History form to be placed on file at the district office. In the event of an outbreak of a vaccine-preventable disease in school, the local health officer has the authority to exclude all susceptible persons, including school staff. This authority would likely be exercised in the event of one or more cases of measles or rubella within the school. Susceptible, as related to measles, means any staff member born after January 1, 1957.

A staff member may claim an exemption for health, religious or philosophical reasons. However, such a staff member who files an exemption may be excluded if an outbreak occurs at his/her school. A staff member who is excluded is not eligible to receive sick leave benefits unless he/she is ill or physically disabled or is otherwise provided for in the collective bargaining agreement.

If a staff member needs to be immunized, he/she should contact a personal licensed health care provider or clinic. Immunizations may also be available at a nominal cost from the county health department.
